**ANNUAL VITAL STATISTICS  
REPORT – 2012**

Vital Statistics Division  
Department of Economics & Statistics  
Thiruvananthapuram  
November 2014

## **PREFACE**

*Civil Registration System is a continuous, permanent and compulsory recording of the occurrence and characteristics of vital events. The main objective of the Civil Registration System is to record the annual change of population at national and state level in between two successive decennial Censuses. The registration of births and deaths has been made statutory through Registration of Births and Deaths Act 1969. The act came into force on 1<sup>st</sup> April 1970 in our State.*

*The registering authorities at the local bodies are Secretaries of Grama Panchayats, Health Inspectors of Municipalities, Health Officers of Corporations and the Executive Officer of Kannur Cantonment The report titled “Annual Vital Statistics Report 2012” is a compilation of the vital events reported from the registering authorities in the State.*

*The report is prepared by Vital Statistics division of the Directorate under the supervision and control of Smt.E.Baby, Director (SDP) & Additional Chief Registrar of Births & Deaths The sincere efforts put in by , Shri.Shanoj Sanker, Statistical Assistant Gr.II, Smt.S. A Suma ,Smt Bindu .P.S& Sri. B. R. Rajesh kumar, Statistical Assistant Gr.I, and Shri.John Chacko ,Research Assistant and the timely advice and guidance given by Smt.Sobhana Pillai.L, Deputy Director, Vital Statistics Division made this publication a reality.. I appreciate the collective efforts of the above Officers in this endeavor.*

*I would like to place on record the co-operation and valuable services rendered by the IKM, Local Registrars, District Registrars, Deputy Directors, staff in the District Statistical Offices for bringing out this publication.*

*I hope that this report would immensely benefit those who work in the Health sector and Researchers in the field.*

*Suggestions for further improvement of the report will be highly appreciated.*

## **DEFINITIONS USED IN THIS REPORT**

1. **Sex ratio** is the ratio of Females to males in a population measured per thousand males.

$$\text{Sex Ratio} = \frac{\text{Number of females} \times 1000}{\text{Number of males}}$$

2. **Sex Ratio at birth** =  $\frac{\text{Number of female birth registered}}{\text{Number of male birth registered}} \times 1000$

3. The **masculinity proportion** is the proportion of males in the total population.

$$\text{Masculinity proportion} = \frac{\text{Number of males in the Mid year population}}{\text{Total Mid year population}} \times 1000$$

4. The **Aged – child ratio** indicates whether or not a population is young or ageing

$$\text{Aged child ratio} = \frac{\text{Population of above 60 yrs}}{\text{Population of below 15 yrs}} \times 100$$

5. The **(Total) dependency ratio** is an age-population ratio of those typically not in the labour force (the dependent part) and those typically in the labour force (the productive part). It is used to measure the pressure on productive population. The dependent part usually includes those under the age of 15 and over the age of 64. The productive part makes up the population in between, ages 15 – 64. It is normally expressed as a percentage. The **(total) dependency ratio** can be decomposed into the **child dependency ratio** and the **aged dependency ratio**.

$$\text{Total dependency ratio} = \frac{(\text{Population of 0-14 years} + \text{Population of above 65 years})}{\text{Population of 15-64 years}} \times 100$$

$$\text{Young (child) dependency ratio} = \frac{\text{Population of 0-14 ages}}{\text{Population of 15-64 ages}} \times 100$$

$$\text{Old (aged) dependency ratio} = \frac{\text{Population of above 65 years}}{\text{Population of 15-64 ages}} \times 100$$

**6. Crude Birth Rate(CBR)** is the nativity or childbirths per 1,000 people per year. When the crude birth rate is subtracted from the crude death rate, it reveals the rate of natural increase.

$$\text{Crude birth rate} = \frac{\text{Number of Live birth during the year}}{\text{Mid-year population}} \times 1000$$

**7. The General Fertility Rate(GFR)** is the annual number of live births per 1,000 women of childbearing age (often taken to be from 15 to 49 years old).

$$\text{General fertility rate} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age group (15-49) years}} \times 1000$$

**8. Age Specific Fertility Rate (ASFR)** is the annual number of live births per 1,000 women in particular age groups (usually age 15-19, 20-24 etc.)

$$\text{Age specific fertility rate} = \frac{\text{Number of live birth in a particular age group}}{\text{Mid-year female population of the same age group}} \times 1000$$

**9. The Total Fertility Rate (TFR)** of a population is the average number of children that would be born to a woman over her lifetime if (1) she were to experience the exact current age-specific fertility rates (ASFRs) through her lifetime, and (2) she were to survive from birth through the end of her reproductive life. It is obtained by summing the single-year age-specific rates at a given time.

$$\begin{aligned} \text{Total fertility rate} &= \frac{( \text{Sum of age specific fertility rates over different age groups})}{X \text{ (Width of age group) / 1000}} \\ &= \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR}}{1000} \end{aligned}$$

**10. The Gross Reproduction Rate (GRR)** is the average number of daughters that would be born to a woman (or a group of women) if she survived at least to the age of 45 and conformed to the age-specific fertility rate of a given year. It is often regarded as the extent to which the generation of daughters replaces the preceding generation of females.

$$\text{Gross reproduction rate} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR for female live births}}{1000}$$

11. The **Child-woman ratio** is the number of children aged 0 to 4 per 1,000 women of childbearing age. It is used as an index of fertility when reliable birth statistics are not available.

$$\text{Child-women ratio} = \frac{\text{Population of 0-4 age group}}{\text{Female population in the age group 15-49}} \times 1000$$

12. The **Crude Death Rate (CDR)** is the total number of deaths per year per 1000 people

$$\text{Crude death rate} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} \times 1000$$

13. The **Infant Mortality Rate (IMR)** is the number of deaths of children less than 1 year old per 1000 live births.

$$\text{Infant mortality rate} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

14. **Neo-natal mortality rate** is the number of deaths during the first 28 completed days of life per 1,000 live births in a given year or period. **Neonatal deaths** may be subdivided into **early neonatal deaths**, occurring during the first seven days of life, and **late neonatal deaths**, occurring after the seventh day but before the 28 completed days of life. **Postneonatal mortality rate** is the number of deaths after 28 days of life but before one year per 1,000 live births in a given year or period. **Perineonatal mortality rate** is the number of deaths between the foetal viability (22 weeks gestation) and the end of the 7th day after delivery per 1,000 live births in a given year or period.

<i>Neo-natal mortality rate</i>	=	<i>Number of infant deaths &lt; than 29 days during the year</i>
		<i>----- X 1000</i>
		<i>Number of live births during the year</i>
<i>Early neo- natal mortality rate</i>	=	<i>Number of infant deaths &lt; than 7 days during the year</i>
		<i>----- X 1000</i>
		<i>Number of live births during the year</i>
		<i>Number of infant deaths of 7 days to &lt; than 29 days during the year</i>
<i>Late neo- natal mortality rate</i>	=	<i>----- X 1000</i>
		<i>Number of live births during the year</i>
<i>Post neo- natal mortality rate</i>	=	<i>Number of infant deaths of 29 days to &lt; than one year during the year</i>
		<i>----- X 1000</i>
		<i>Number of live births during the year</i>
<i>Peri neo- natal mortality rate</i>	=	<i>Number of still births and infant deaths of &lt; than 7 days during the year</i>
		<i>----- X 1000</i>
		<i>Number of live births and still births during the year</i>

**15. Still birth rate** is the number of fetal deaths (stillbirths) per 1,000 live births plus fetal deaths (stillbirths).

<i>Still birth rate</i>	=	<i>Number of still births during the year</i>
		<i>----- X 1000</i>
		<i>Number of live births and still births during the year</i>

**16. Maternal Mortality Ratio (MMR)** is the number of maternal deaths per 1000 live births and still births.

<i>Maternal Mortality Ratio</i>	=	<i>Number of Maternal Deaths during the year</i>
		<i>----- X 1000</i>
		<i>Number of live births and still births during the year</i>

## *Chapter -1*

# *The Civil Registration System in Kerala*

### **1.1 Introduction**

*Registration of births and deaths is an important source for demographic data for socio-economic development and population control in developing countries. In India, the need for dependable demographic data was felt soon after independence heralding the era of Five Year planning. In the beginning, the registration of births and deaths started on voluntary basis and there was no uniformity in statistical returns resulting in both under registration and incomplete coverage. In order to unify the civil registration activities, the Civil Registration System (CRS) was introduced in India under the Registration of Births and Deaths Act (RBD Act), 1969. Civil Registration System may be defined as a continuous recording of vital events such as births, deaths and marriages occurring in a population. The basic uses of data from Civil Registration System are*

- *Maintenance of permanent records on births and deaths as legal documents.*
- *Assessment of continuous changes in population.*
- *Evaluation of success of socio-economic programmes by indicators based on vital events and size of population.*

*As a matter of fact, requirement of this system as legal proof of births and deaths should in itself be strong enough reason for any country to have a fully operational CRS. In India the registration of vital events and the administrative machinery for this purpose has been in existence for more than a century. It had been working under diversified Acts and executive instructions thus making it unsuitable for the independent India.*

### **1.2 Registration of Births and Deaths Act 1969**

*This Act replaced the then existed laws and unified the system of registration throughout the country. Under the RBD Act the registration of births and deaths is made compulsory. It has become mandatory on the part of head of household or his representative to report and register domiciliary vital events, for medical officers in charge of medical institution in respect of births and deaths occurring in these institutions. The Act also provided the statutory authority at Centre, State, District and local level. It prescribed definitions, principles, personnel and penalties connected with enforcement of the Act. It enabled Central Government to insist uniformity in registration procedures and bring out comparability in vital statistics registered in different parts of the country.*

*Statistics of births and deaths are compiled on the basis of Civil Registration System introduced under the Registration of Births and Deaths (RBD) Act, 1969. It is required under the Act that each vital event should be reported within 21 days from the date of occurrence of the event. This Act also provides for registration of events beyond 21 days on payment of some penalty. In the case of large delays registration can only be done after taking the permission of the District Magistrate.*

#### **National Level**

*At national level the Registrar General of India (RGI) administers CRS. He is empowered to issue general directions and take steps to co-ordinate and unify the activities of Chief Registrars of the States, who are the Chief Executive authority in the*

*states for executing the provision of RBD Act 1969 and the rules and orders made there under. They were responsible for coordinating, unifying and supervising the work of CRS within their respective state.*

#### ***State Level***

*The Registration of Births and Deaths Act 1969 (Central Act 18 of 1969) came into force in Kerala on 1<sup>st</sup> April 1970 by the Government of India Gazette notification dated 21<sup>st</sup> march 1970 along with many other states. The Kerala Registration of Births and Deaths Rules 1970 published in G.O.(P)No.7/70/LAD dated 29<sup>th</sup> June 1970 by S.R.O.No.262/70 Gazette dated 1<sup>st</sup> July 1970 have been approved by the Government of India under section 10(1) of the said Act.*

*As per the circular No.6/4/97/VS(CRS) dated 31/5/1999 of the office of the Registrar General of India, the revamped Civil Registration system was introduced with effect from 1/01/2000. In tune with the newly introduced system ,the Registration of Births and Deaths Rules 1970 was replaced with the new rules, viz Kerala Registration of Births and Deaths Rules 1999 and it was published as per the order G.O .(P)No.8/2000/LSGD dated 06/01/2000.*

### ***1.3 Organizational Setup in the State***

- ***Chief Registrar***

*The Director of Panchayaths, Government of Kerala is the Chief Registrar of Births and Deaths.*

- ***Additional Chief Registrar***

*The Additional Director of Economics and Statistics Department is the Additional Chief Registrar of Births and Deaths.*

- ***Deputy Chief Registrar***

*A Deputy Chief Registrar assists the Chief Registrar in the day-to-day affairs relating to the registration of Births and Deaths at the State level. Another Deputy Chief Registrar assists the Additional Chief Registrar who is the Deputy Director of Economics and Statistics Department.*

- ***District Registrars***

*The Deputy Director of Panchayaths of the 14 districts in the State are functioning as the District Registrars. The Secretaries of Corporations and Municipalities and the Executive Officer of Kannur Cantonment area are exercising the powers of District Registrars.*

- ***Additional District Registrars***

*The Deputy Directors of the 14 District Statistical office are functioning as the Additional District Registrars of Births and Deaths of respective revenue districts.*

- ***Registrars***

*The Secretaries of Grama Panchayats, Health Officers of Corporations, Health Inspectors of Municipalities and Executive Officer of Kannur Cantonment area are functioning as the Registrars of births and deaths.*

#### **1.4 The Process**

*The data reporting forms contain details of birth, death and still birth. Birth registration form contains information on date of occurrence/registration, usual residence of mother, place of birth, sex and weight of the child, order of birth, type of medical attention at birth, type of delivery and characteristics of the parents including their name, age, religion, educational status, occupation etc. In the case of death, information includes name, sex, age, marital status, religion, occupation, usual residence of the deceased, place of occurrence, date of occurrence/registration, cause of death, whether medically certified or not and kind of medical attention received at the time of death and characteristics of the mother, pregnancy period etc. in the case of still births. These forms have two parts: legal and statistical. The statistical part of the vital events registered in the registration units are entered in to the Sevana software and are forwarded to the District Offices of Economics and Statistics .From the district offices, the data sets are forwarded to the Directorate in computer media on an annual basis for the preparation of the Annual Vital Statistics Report. The Vital Statistics Division of the DES prepares this report as per the methodology and instructions issued by the Registrar General of India (RGI) from time to time. The report contains district-wise statistics of births, deaths, infant deaths, still births and the related vital rates among other things. Information Kerala Mission (IKM) has provided "Sevana" package in all the Grama Panchayats, Municipalities and Corporations for registration of births and deaths and issue of certificates.*

#### **1.5 Limitations of the data**

*As far as the level of registration is concerned Kerala has got cent percent record in the registration of births and 99.5 percent in the case of deaths. Some of the vital events are seen unregistered. This may be due to lack of awareness about the need and importance of registration of births and deaths and lack of registration procedure knowledge among the public. This may affect the quality of the statistical data. Efforts are being taken to create mass awareness about the importance and necessity of registration.*

#### **1.6 Status of Reporting**

*The local bodies, viz., the panchayats, municipalities and corporations function as the registration units of vital events in the State. The details of registration units (Rural& Urban) are shown in table A1. Utmost care has been given for the above process avoiding duplications and omissions, and eventually a cent percent reporting was achieved both in rural as well as urban areas.*

*In this report population census 2011 figures are used for the projection of mid-year 2012.Also in Kerala the number of registration units are 1044 .(978 panchayaths,5 corporations , 60 municipalities and one cantonment(kannur))*

***Chapter -2***  
***Analysis of Vital Events – Live Births***

## **2.1 LIVE BIRTHS**

### **2.1 Registered live births**

The criteria followed for including the vital events are “Place of Occurrence of events” and “Year of Registration”. By using the above methodology vital events are registered in the local registration units and the number of live births registered during 2012 is 550411 as against 560268 in 2011. Out of the total 550411 live births registered in 2012, 203394 were reported from rural areas and 347017 were reported from urban areas.

The registered live births by sex are presented in table 2.1. This table reveals that number of male births is greater than female births. Out of total live births registered, 51.15% are males and 48.84% are females. However, there is 0.01 % non-reporting of sex in the total live births registered in 2012. This may be due to the non-recording of information from the legal part to the statistical part.

**Table- 2.1**  
**Registered live births by sex –2012**

<b>Sex</b>	<b>No. of births registered</b>	<b>%</b>
<i>Male</i>	<b>281519</b>	<b>51.15</b>
<i>Female</i>	<b>268864</b>	<b>48.84</b>
<i>NR</i>	<b>28</b>	<b>0.01</b>
<b>Total</b>	<b>550411</b>	<b>100</b>

Every vital event is expected to be reported within 21 days from the date of occurrence of the event. Even though there exists a vigilant system of birth registration at the place of delivery (hospital) itself, there were delayed registrations. During the year 2012, 28.72% births registered were delayed registrations in the rural sector where as in urban sector, 12.24% were delayed registrations.

### **2.2 Live births by month of occurrence**

By analyzing the seasonal live births, it is evident that highest number of live births were registered during March is 9.38%, and the least is during August 6.64%. The month wise live births registered during 2012 were shown in the following table.

**Table – 2.2**  
**Month-wise distribution of live births registered - 2012**

<b>Total</b>	<b>550411</b>	<b>100</b>

### **2.3 Live birth by medical attention at birth**

*Table 2.3 presents the distribution of live birth by type of medical attention received at the time of delivery. A major portion of live births have occurred in an institutional framework. The emergence of numerous hospitals both in Government as well as private sector with specialist services across the State have contributed largely for a safe and hygienic delivery. In spite of having enough modern medical facilities across the State, a small portion of live births (1.30%) is still attended by the traditional birth attendant/relatives. It is worthwhile to mention that a significant proportion of live births, say, 79.41 % attended by trained health professionals or occurred at health care institutions. The type of attention at delivery is not stated for 17.52% of births. It is also observed that among the institutional births, 58.34% of the total births occurred in private hospitals, whereas only 21.07% of the total birth occurred in government institutions.*

**Table – 2.3**  
**Percentage distribution of live birth by medical attention at birth-2012**

#### **2.4. Live birth by method of delivery**

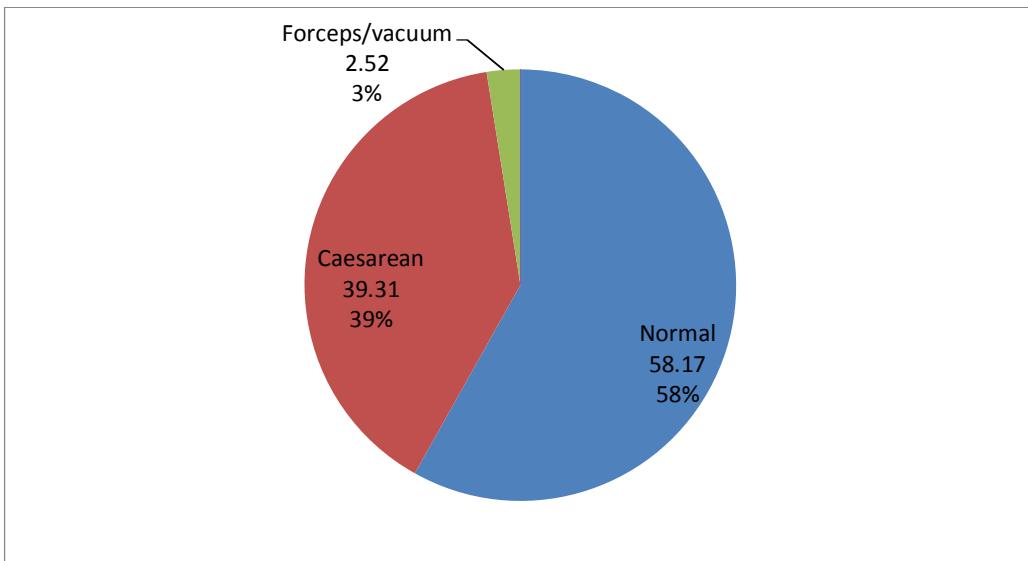

The Table 2.4 gives the percentage distribution of registered live births occurred in institutions by method of delivery. Among the number of Live births in the Govt. Hospitals, 60.56% are of normal delivery and 38.43% are caesarians.

Similarly, among the Live births in the private hospitals, 57.30% are normal and 39.63% are Caesarian.. Also it reveals that out of total delivery, 58.17% are reported normal and only 39.31% are caesareans. This may be due to the combined effect of so many factors including the attitude of women to have hassle free delivery, commercialization of the system of delivery etc.

**Table – 2.4**  
**Percentage distribution of registered live births by institutions and Method of delivery - 2012**

## **2.5. Live births by age of mother and birth order**

Table 2.5 shows the distribution of live births by age of mother and birth order. The data reveals that the highest number of live births is in the age group of 25-29(39.07%), followed by the age group 20-24 (36.36%) and there after it declined gradually with increase in age. The number of live births corresponding to the group having age below 15 is five. It is to be noted that 4.59% of live births belong to the age group 15-19. This shows that the girls are getting married before the age of 18 years and giving birth to children. In the reproductive age group 15-49, the highest number of live births occurs in the age group of 25-29. It can be seen that the fertility decreases with increase in the age and only a minute 0.02 % of births occur in the age group above 45 years.

**Table – 2.5**

Among the registered births, 48.56% are of first order followed by second order and thereafter it gradually declined for higher birth orders. This phenomenon explains the State's low fertility levels. This pattern is similar to both rural and urban areas. This is evident from the chart given below.

## **2.6. Live births by Educational level of mother and father**

Table 2.6 shows that only less than 0.72% of live births have occurred to illiterate fathers and mothers. The percentage of live birth is the highest for the parents of literacy level metric but below graduates and there after it declined gradually with increase in levels of education. From the tables B-10 and B-11, it can be seen that highest order (10) births have occurred to parents of literacy level primary but below metric.

**Table – 2.6**  
**Percentage distribution of live births by educational level of parents - 2012**

## **2.7. Live birth by religion**

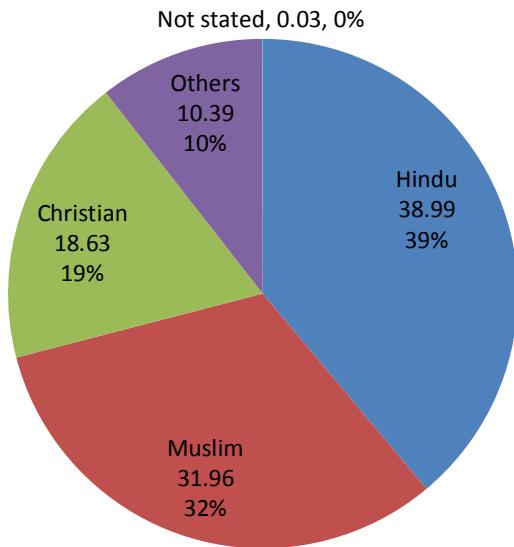

Religion wise analysis of live births reveals that out of the total 550411 live births 38.99% belong to Hindu Community 31.96%belong to Muslim Community 18.63% belong to

*Christian Community. Again a meager 0.03 % didn't disclose their religion. High order births are more in Muslim community. Further, religion wise analysis on the age group of mothers reveals that a Muslim women belonging to the age group 15- 19 becoming mother before attaining the age of maturity is quite prevalent. This fact points out that these women are getting married at the age of 18 or even before. Even though individual cases of live births occurred to mothers in the age group below 15 is negligibly small, the very existence of such a practice is a black mark to this 100% literate State.*

Table 2.9(a) & 2.9(b) present the percentage distribution of live birth by duration of marriage of mother and birth order. It reveals that 60.67% - of births were occurred to young couples having duration of marriage 0-4 years and 27.79% of live births were occurred within 5-9 years after marriage. Obviously higher proportion of birth (44.67 %) is of the order first for the young couples. As the marriage duration goes up shifting of births to higher order can be observed.

## **2.10. Live births by duration of pregnancy and birth weight**

One of the important causes of still birth and infant death is due to premature delivery. Again premature babies having low birth weight(less than 2.5kg) are susceptible to diseases. Among the live birth registered during the year 2012, 13.01% were born with low birth weight.. A clear association between duration of pregnancy and birth weight can be observed from Table 2.10 and it reveals that 36.53%of babies having birth weight between 2.500-3.000 kg. and 48.88% of babies having weight between 3.000 -4.000 kg and only 1.47%of babies having birth weight above 4.000kg. Also it can be seen that 65.19% deliveries are occurred within the pregnancy period 37-39 weeks.

### **2.11. Live births by age of mother and birth weight**

Table 2.11presents the percentage distribution of live birth by age of mother and birth weight. It is observed that cases of low birth weight babies are more to mothers in the higher age group of 25-29 (4.89%)followed by the age group 20-24(4.731%). It is observed that 19.49% of babies are having birth weight between 3.000-4.000 kg are more to mothers in the age group (25-29).

### **2.13. Live birth by method of delivery and age of mother**

The delivery characteristics by mother's age are presented in the Table 2.13. About 58.56% of deliveries are normal. As we analyses mother's age group, it can be observed that occurrence of caesarean deliveries are more in the case of mothers belonging to the age group of 25-29. Also 23.04% of normal deliveries are belongs to mothers of age group 20-24 and 16.09% caesareans are occurred for mothers of age group 25-29.

***Analysis of Vital Events – Deaths***

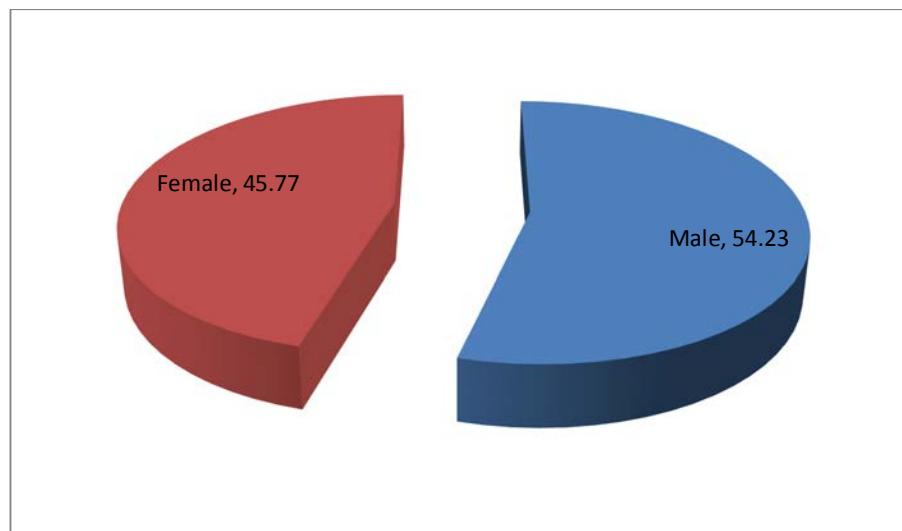

**3.1. Deaths by sex**

239982 deaths were registered in the state during 2012. Table 3.1 provides the distribution of registered deaths in the state during 2012. Out of the total 239982 registered deaths, males constitute 54.23% (130142) and females constitute 45.77 % (109829), the male Deaths were more than that of female.

### **3.4. Deaths by type of medical attention at death**

*Table 3.4(a) and 3.4(b) shows the result of medical attention that the deceased had received at the time of death. It is evident from the Table that majority of the deaths have occurred in institutions. Out of 60.07% of institutional deaths 32.55% of deaths have occurred in rural areas as compared to 27.52% are in urban areas .In the rural sector, 14.41% of deaths were non institutional. Non-institutional deaths are higher in rural areas as compared to urban areas. Another feature observed is that 22.64% of deaths have not received any medical attention.*

**3.7. Cause of deaths by age and sex**

One of the main objectives of death registration is to know the causes of death. Out of 239982 registered deaths 23.86% of death is due to Heart attacks followed by Asthma 12.25%. Death due to Cancer is 6.48% and that of Diabetes is 6.58%. Among the causes of death, 2.10 % of them cases are due to suicide. It can be observed that percentage of suicidal deaths is higher for males (1.55%) than that for females (0.55%). Also 1.23% of registered deaths are due to Accident and 1.64% of deaths are due to Kidney trouble.

***4.1. Infant deaths by sex***

*Table 4.1(a) given below presents the percentage distribution of infant deaths in the state for the year 2012. Out of 4413 infant deaths registered, only 30.34% infant deaths are occurred in rural area and 69.66% occurred in urban area. It is observed that male infants experienced higher mortality than female infants Table 4.1(b) reveals that percentage of infant male death is 50.87% where as that of female is 48.97%*

#### **4.2. Infant Deaths by age**

Percentage distribution of infant death by age is presented in the Table 4.2. The data reveals that 61.89% of infant deaths have been occurred to the infants aged less than seven days. 15.52% of infant death belongs to the age group between 7-28 days and 16.79% belongs to the age group 28 days to 6months. Thus in Kerala majority of infant death occurred within 7 days of birth. A special care has to be provided to the babies having underweight. The similar pattern could be observed in Rural and urban areas.

### ***Analysis of Vital Events – Still Births***

#### ***5.1. Still births by sex***

There were 2486 stillbirths registered in the state during 2012. Table 5.1(a) provides the percentage distribution of registered stillbirths by sex. It can be noticed from the Table that percentage of male stillbirths are greater than that of female still births. Also stillbirths registered in the urban sector are higher than that in the Rural sector.

#### ***5.2. Still births by age of mother***

Table 5.2 shows the percentage distribution of still births by age of mother at birth .It is evident from the Table that the incidence of still birth is more in the case of mothers belonging to below 15 age group. In that age group Three still births are reported out of Eight deliveries The incidence of still births is very low for all other age groups of mothers and this may be due to the best medical care availed by these mothers during their pregnancy.

**Table - 5.2**

**5.3 Still births by duration of pregnancy**

Percentage distribution of still births by duration of pregnancy is given in the Table 5.3. For 40.75% of still births, duration of pregnancy is less than 32 weeks and 24.50% of still births has occurred during the pregnancy period 37-39 weeks. This data reveals that one of the predominant causes for still births is due to premature delivery.

#### **5.4. Still births by type of medical attention received**

Table 5.4 below gives the percentage distribution of still births by type of medical attention received at the time of birth. It is observed that 99.84% of still births have occurred in institutions. Out of 2482 stillbirths occurred in institution, 49.80 %are reported from Government Institution and 50.04%) are from private medical institutions.

## ***Chapter -6*** ***Analysis of Vital Rates***

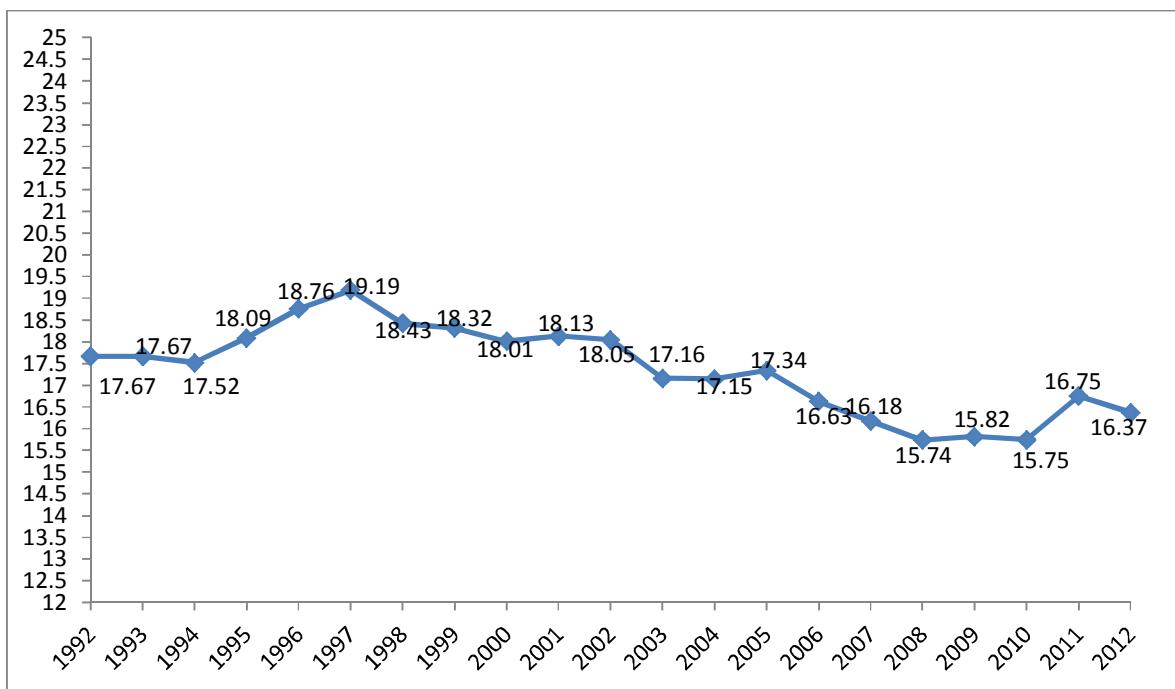

### **6.1 Sex Ratio**

*Sex Ratio is worked out to be 1084 females for 1000 males. Whereas the sex ratio at birth is 955, which means that 955 Females for 1000 males.*

### **6.2 Crude Birth Rate**

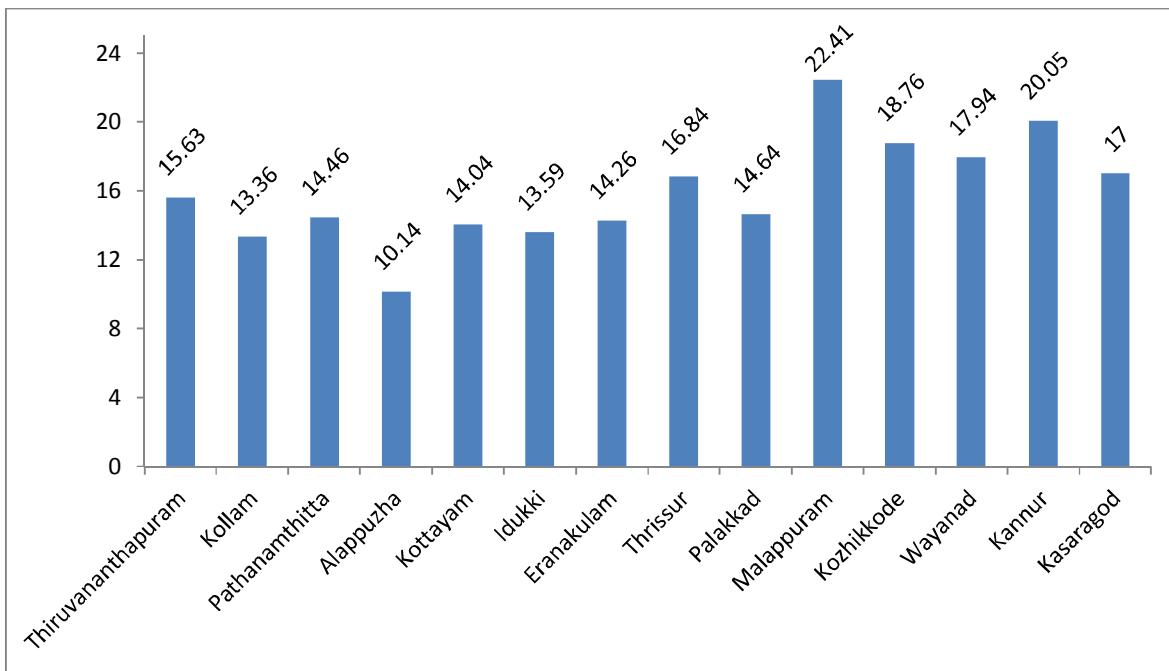

*Crude Birth Rate of the State shows a declining tendency. During the year 2012, the CBR is 16.37, which shows a decrease from 2011, for the year 2011 CBR is 16.75. The trend is shown in the chart below.*

**Trend in Crude Birth Rate –Kerala (1992-2012)**

*The District wise analysis of the vital events shows that the higher birth rate of 22.41 was recorded in Malappuram district, followed by Kannur (20.05) and the lowest in Alappuzha (10.14) followed by Kollam (13.36) . Chart given below gives a comparison of the district by level of CBR.*

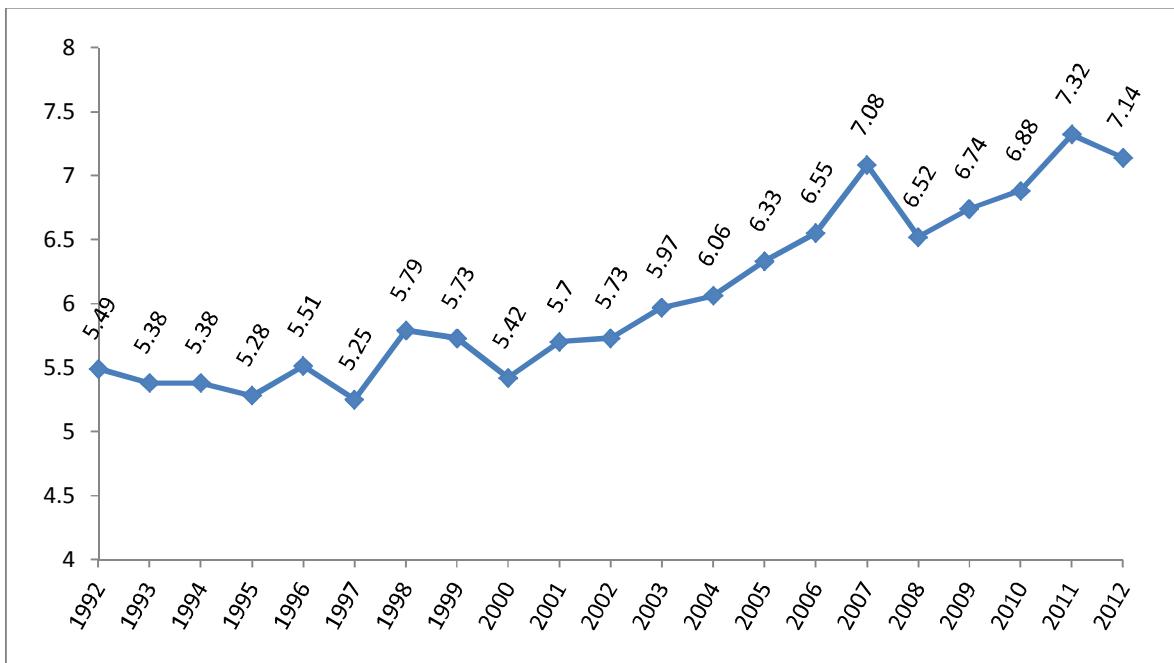

### **District wise Birth Rate – 2012**

### **6.3 Crude Death Rate**

*The Crude Death Rate (CDR) of the State during past 20 years is presented in the chart given below. From the chart given below, it is observed that the CDR increases till 2007 from 2000 and falls to 6.52 in 2008 and then increases to 6.74 in 2009 and 6.88 in 2010 and again it increased to 7.32 in 2011but it is decreased to 7.14 in 2012.*

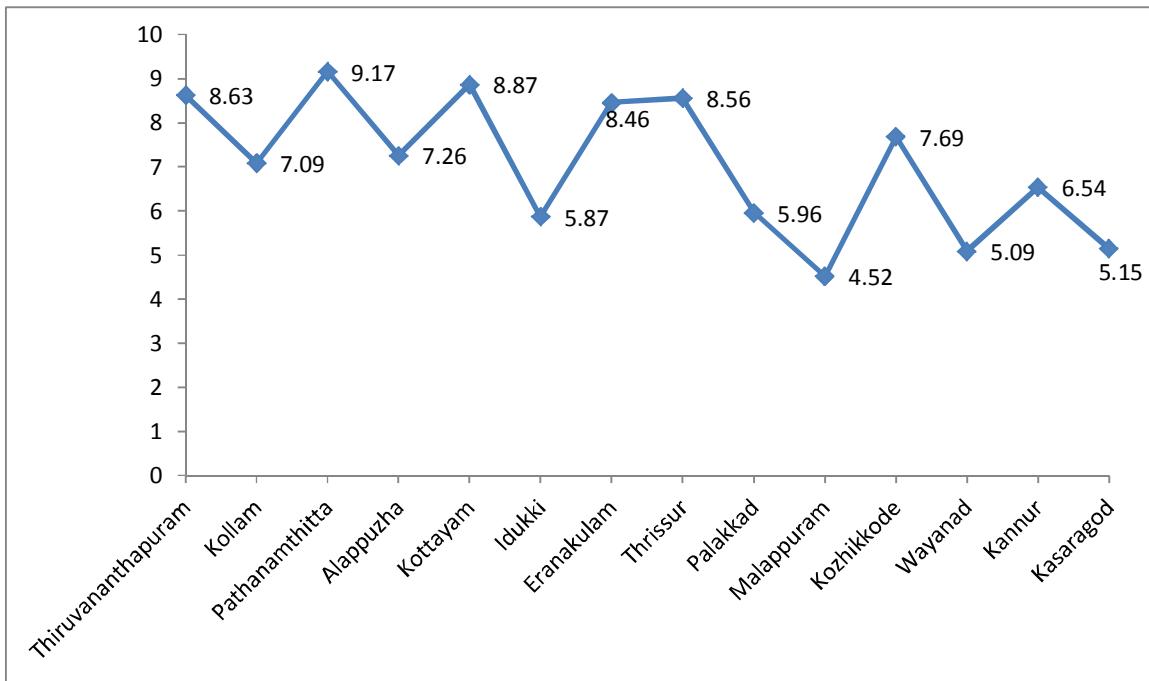

### ***Crude Death Rate (1992-2012)***

#### ***6.4 District Wise Death Rate 2012***

*District wise death rates are shown in the chart below. Among the districts the highest death rate 9.17 was recorded in Pathanamthitta followed by Kottayam (8.87) and the lowest in Malappuram (4.52) followed by Wayanad (5.09)*

<i>Kasaragode</i>	3.16	3.16	3.16
<b>Total</b>	<b>7.97</b>	<b>8.04</b>	<b>8.02</b>

*Infant Mortality Rate of the State shows an upward trend up to 2007 from 2004 and then starts declining. However in 2011 IMR shows a marginal increase to 7.53 from 7.42 of 2010. IMR of the state during the past 10 years is given in the chart. Infant Mortality Rate of the state during the year 2012 is increased to 8.02*

**Infant Mortality Rates (1992-2012)**

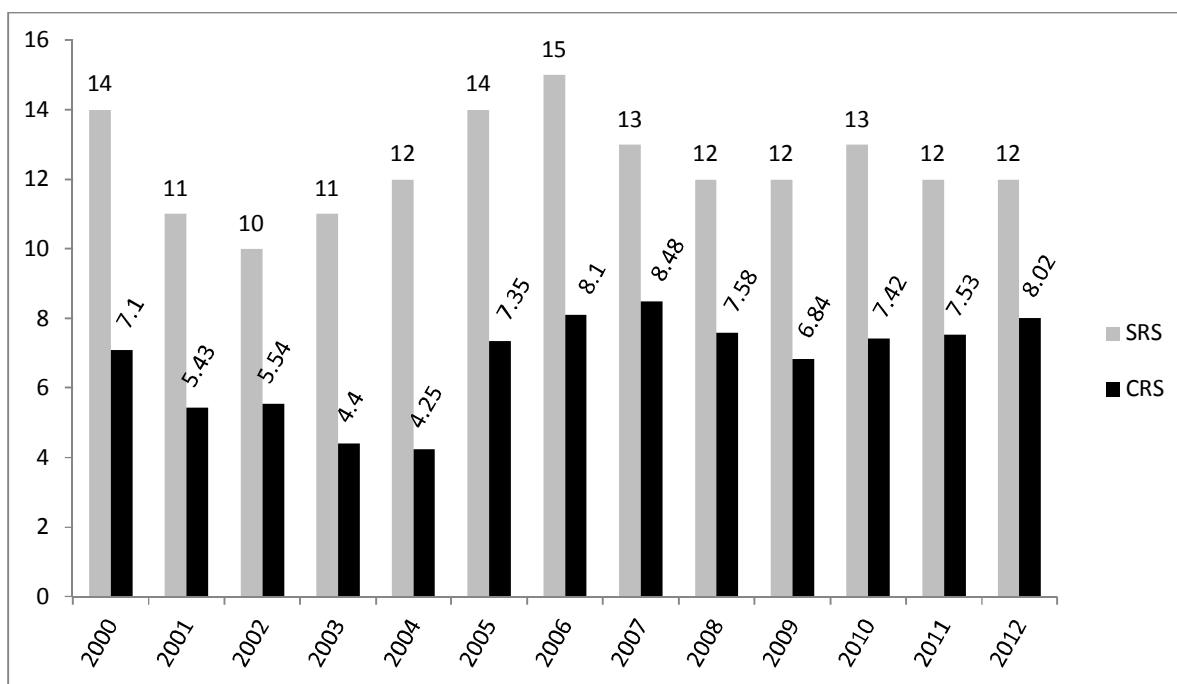

### **6.6 Comparison of IMR based on CRS and SRS**

*IMR estimated from SRS data is higher than that worked out from CRS over the years 2000-2012. In SRS, IMR is estimated on the basis of data collected from 250 selected sample units .Since IMR is an essential requirement for any health planning more concentration should be given for the complete registration of infant deaths.*

### ***6.7. Pregnancy related deaths***

*Maternal mortality ratio of the state for the year 2012 is computed as 0.20. Complications of pregnancy, childbirth and Heart attack are some major causes of maternal*

deaths in all age groups. Table 6.6 reveals that 33.03% of maternal deaths have been occurred in the age 45+ is the highest Followed by 16.07% in the age group 25-29.

**Table -6.6**  
**Percentage distribution of maternal death by age-2012**

## 6.7. Conclusion

*It is worthwhile to mention that CRS is the only source, which can provide vital rates at below state level. Even though cent percentage registration has attained in the case of births, under registration of deaths still exist. Level of registration of maternal deaths and infant deaths are not satisfactory. There is also a need to correctly identify the maternal deaths for estimating the vital indicator MMR. Full coverage of maternal deaths and infant deaths by registration machinery only can help to calculate rates such as IMR, MMR etc., which are essential for health planning. Hence more concentration should be given to the proper implementation and monitoring of Civil Registration System.*

*Again certain flaws have been noticed while processing the data received from the registration authorities. These defects might have been occurred during the reporting of events. Normally the primary data on vital events are collected at the place where the event happened-normally the hospital itself .Lack of knowledge regarding the schedule and the reporting procedure tends to mistakes which generally cannot be rectified at any further stages of data entry or data processing.*
